

**The Rai Staging System**

Stage	Clinical Features	Prognostic Risk	Median Survival (y)
0	Lymphocytosis in peripheral blood and bone marrow only	Low	>13
I	Lymphocytosis and enlarged lymph nodes	Intermediate	8
II	Enlarged spleen, liver, or both with or without enlarged lymph nodes	Intermediate	8
III	Lymphocytosis and nonimmune anemia (hemoglobin <11 g/dL)	High	3
IV	Lymphocytosis and nonimmune thrombocytopenia (platelets <100 x 10 <sup>9</sup> /L)	High	3

**The Binet Staging System**

Stage	Clinical Features	Prognostic Risk	Median Survival (y)
A	<3 enlarged lymph node groups, hemoglobin >10 g/dL, platelets >100 x 10 <sup>9</sup> /L	Low	>13
B	>3 enlarged lymph node groups, hemoglobin >10 g/dL, platelets >100 x 10 <sup>9</sup> /L	Intermediate	8
C	Hemoglobin <10 g/dL or platelets <100 x 10 <sup>9</sup> /L (independent of lymph nodes)	High	<3
