The Honorable Kathy Castor
U.S. House of Representatives
Washington, D.C. 20515

The Honorable Joe Heck
U.S. House of Representatives
Washington, D.C. 20515

Dear Reps. Castor and Heck:

On behalf of the American College of Physicians (ACP), I am writing to express our support for H.R. 1117, the Creating Access to Residency Education Act of 2015 (CARE Act). We appreciate your leadership and efforts to ensure an adequate supply of physicians to meet the nation's health care needs.

The American College of Physicians is the largest medical specialty organization and the second-largest physician group in the United States. ACP members include 141,000 internal medicine physicians (internists), related subspecialists, and medical students. Internal medicine physicians are specialists who apply scientific knowledge and clinical expertise to the diagnosis, treatment, and compassionate care of adults across the spectrum from health to complex illness.

The United States is facing a growing shortage of physicians in key specialties. The College is particularly concerned about the supply of internal medicine specialists in light of current U.S. Census Bureau projections of 10 percent population growth by 2025, including a 46 percent increase in the population over 65. Internal Medicine specialists are at the forefront of managing chronic diseases and providing comprehensive and coordinated health care. The skills of internists will be increasingly necessary in taking care of an aging population with a growing prevalence of chronic diseases. Current projections indicate there will be a shortage of 12,500 to 31,100 primary care physicians by 2025.

This legislation would be an important step toward ensuring access to care by establishing federal grants, in partnership with other stakeholders, to support the creation of new medical residency positions. Importantly, this legislation would provide larger grants to fund primary care positions and target areas with significant need by focusing on states where there are few medical residents compared to the general population.

ACP believes that a comprehensive graduate medical education (GME) policy, that fully funds existing and additional residency positions on a prioritized basis, is needed to ensure that the nation has an adequate supply of the types of physicians needed to treat patients, that they enter the workforce with the knowledge and skills required to provide the highest quality care, and that all Americans have access to such care. The nation will not be able to expand access,

improve health outcomes, and decrease health care expenditures without a national health care workforce policy and the appropriate direction of funding to achieve these goals. The College also believes the costs of financing GME should be spread across the health care system and that all payers should be required to contribute to a financing pool to support residencies that meet policy goals related to supply, specialty mix, and site of training.

We look forward to working with you to advance this legislation through the Congress this year and stand ready to serve as a resource for you on any matters regarding the physician workforce.

Sincerely,
