Washington, DC 20515

Dear Congresswoman Sewell, Congressman Katko, Congressman Suozzi, and Congressman Davis:

On behalf of the Graduate Medical Education (GME) Advocacy Coalition, the undersigned organizations offer our enthusiastic support for the Resident Physician Shortage Reduction Act. This bipartisan legislation is crucial to expanding the physician workforce and to ensuring that patients across the country are able to access quality care from providers.

The need for physicians continues to grow faster than supply, leading to an estimated shortfall of between 54,100 and 139,000 primary care and specialty physicians by 2033. The COVID-19 pandemic has further exposed the significant barriers to care that patients face, and has also highlighted rising concerns of clinician burnout. This is particularly alarming given that more than two of five currently active physicians will be 65 or older within the next decade, raising concerns about the impact of physician retirement. Additionally, the U.S. population is continuing to both grow and age, and access issues persist in rural and underserved areas. The physician workforce is a critical element of our nation's health care infrastructure, and if we do not address this impending problem, patients from pediatrics to geriatrics and nearly everyone in-between, will find it even more difficult to access the care they need.

America's medical schools, teaching hospitals, and their physician partners are doing their part by investing in physician and health care provider training and leading innovations in new care delivery models that are more efficient and include better use of technologies — like telehealth — that improve patient access to care. Even with these efforts, however, shortages and access challenges will persist unless we expand the physician workforce.

We are grateful that bipartisan congressional leaders worked together to provide 1,000 new Medicare-supported GME positions in the Consolidated Appropriations Act, 2021 – the first increase of its kind in nearly 25 years. The Resident Physician Shortage Reduction Act of 2021 would build on this historic investment by gradually raising the number of Medicare-supported GME positions by 2,000 per year for seven years, for a total of 14,000 new slots. A share of these positions would be targeted to hospitals with diverse needs including hospitals in rural areas, hospitals serving patients from health professional shortage areas (HPSAs), hospitals in

states with new medical schools or branch campuses, and hospitals already training over their caps.

We look forward to working together to support the training of future physicians and to secure the passage of this important legislation.

Sincerely,
