

Data from the 2019 National Youth Tobacco Survey (NYTS) shows that the youth e-cigarette epidemic has gotten even worse in the past year. E-cigarette use among high school students rose from 20.8% in 2018 to 27.5% in 2019, meaning that more than 1 in 4 high schoolers use e-cigarettes. A total of 5 million U.S. kids now use e-cigarettes.

Nearly all (97%) current youth e-cigarette users use flavored e-cigarettes and 70% use e-cigarettes “because they come in flavors I like.” If the Administration’s plan is swiftly and fully implemented, it will play a critical role in reversing this public health crisis.

We also stress our strong support for fully implementing the compliance policy as announced on September 11, which included a prohibition on mint and menthol flavors. As the 2019 NYTS data shows, mint and menthol are just as appealing to youth as other e-cigarette flavors like fruit. The percentage of high school e-cigarette users who report using mint and menthol flavors rose to 63.8% in 2019, up from 51.2% in 2018 and 42.3% in 2017. Given the prevalence of mint and menthol flavors among youth e-cigarette users and the lack of evidence that these flavors play any role in helping adults quit smoking, there is no public health justification to exempt them from any policy proposal. If the goal is to remove the e-cigarettes that are most attractive to youth, any proposal that ignores mint and menthol flavors falls short.

We strongly support the proposed comprehensive prohibition on flavored e-cigarettes and thank you for helping to protect America’s kids from the unrelenting efforts of the tobacco industry to hook kids.

Sincerely,
