Dear Speaker Ryan, Minority Leader Pelosi, Majority Leader McConnell, and Minority Leader Reid,

On behalf of the millions of Americans we represent, we urge Congress in the strongest possible terms to craft a Zika funding package that can be passed with broad support and signed by the President immediately.

As of September 1, 49 locally-transmitted cases of Zika have been identified in Florida, and experts predict others will occur in Texas and in Louisiana, a situation exacerbated by recent flooding. The Centers for Disease Control and Prevention (CDC) reports that 624 pregnant women in U.S. states and an additional 971 in the territories have been infected with Zika. Overall, there are now over 16,000 cases of Zika in the U.S. and territories. Given that Zika infection is often asymptomatic, the reported number of cases is likely an undercount of the actual number of cases. Seventeen babies in the U.S. have been born with microcephaly and, tragically, one of those infants has died. The Administration has declared a public health emergency in Puerto Rico, where experts predict that 25 percent of the island will become infected with the virus by the end of 2016, including thousands of pregnant women. The CDC has issued the first-ever domestic travel advisory, warning pregnant women not to travel to areas of Florida where local transmission of Zika is occurring.

We are continually learning more disturbing news about Zika, which appears to pose an even greater danger than previously thought. While the link between Zika and microcephaly is well documented, the virus may cause less visible, yet still serious problems for infants, some of which may not become apparent for years after birth. While pregnant women and infants are particularly vulnerable to Zika, research is now linking Zika to health consequences in adults, such as Guillain-Barre Syndrome.

As the virus gains a foothold in the mainland U.S., Americans have grown increasingly disillusioned with Congress’ failure to act. Six months have elapsed since the Administration’s request for emergency funds to combat Zika, time that could have been spent better preparing for and preventing the virus. The opportunity for total prevention has been squandered; Congress must act now to contain Zika and prevent it from spreading to other communities. Immediate funding is essential to help communities protect their residents from Zika, enable them to prepare for the future, and ensure that development of vaccines, diagnostics and treatments proceeds as rapidly as possible.

Congress has already delayed too long. All sides must return to the negotiating table immediately to craft a package that can be passed by both chambers and signed by the President. Anything else further endangers the health and well-being of American women, infants, and families.
Sincerely,

AABB
