Learning Objectives

1. Describe the opioid epidemic
2. Summarize the Arizona Opioid Epidemic Act
3. Review Opioid Epidemic Act Resources and Updates
Unintentional injury leading cause of death among 1-44 year-olds

Drug overdose is the leading cause of unintentional injury death in America.

Figure 4. Age-adjusted death rates for the 10 leading causes of death: United States, 2016 and 2017

1Statistically significant decrease in age-adjusted death rate from 2016 to 2017 (p < 0.05).
2Statistically significant increase in age-adjusted death rate from 2016 to 2017 (p < 0.05).

NOTES: A total of 2,813,553 resident deaths were registered in the United States in 2017. The 10 leading causes accounted for 74.0% of all deaths in the United States in 2017. Causes of death are ranked according to number of deaths. Rankings for 2016 data are not shown. Data table for Figure 4 includes the number of deaths for leading causes. Access data table for Figure 4 at: https://www.cdc.gov/nchs/data/databriefs/db326_tables-008.pdf#4.

Bureau Health Statistics
Oxycodone and heroin were the opiate drugs most commonly noted in overdoses determined to be due to opioids during review, October 1, 2018 - April 4, 2019.

- Oxycodone
- Heroin
- Fentanyl
- Methamphetamine
- Benzodiazepine
- Other Rx Opiate
- Cocaine
- Morphine
- Hydrocodone
- Methadone
- Hydromorphone
- Tramadol

AzDHS Vital Statistic Data
Reported Pre-Existing Conditions for Verified Opioid Overdoses:
June 15, 2017-June 14, 2018

- Chronic pain
- Depression
- History of substance abuse
- Anxiety
- Bipolar disorder
- Suicidal ideation
- Diabetes
- Cancer
- COPD
- PTSD
- Schizophrenia or schizoaffective

Learning Objectives

1. Describe the opioid epidemic
2. Summarize the Arizona Opioid Epidemic Act
3. Review Opioid Epidemic Act Resources and Updates
Governor Ducey Declares Statewide Health Emergency In Opioid Epidemic

News Release

June 5, 2017

As the number of opioid overdoses and deaths increase at an alarming rate, we must take action.”

PHOENIX — Governor Doug Ducey today signed an emergency declaration to address the growing number of opioid deaths in our state.
Arizona Opioid Emergency

From June, 2017 through May 2018, ADHS and partners worked tirelessly to answer Governor Ducey’s call to address the continuing increase in opioid-related deaths across Arizona.

**June 2017**
- 2016 Arizona Opioid Report released
- Opioid Emergency declared
- Enhanced Surveillance Reporting implemented
- Implementation of Emergency Opioid Prescribing and Treatment Rules for Healthcare Institutions

**April 2017**
- Executive Order for 7 day fill limit

**October 2017**
- PDMP Mandate in effect

**March 2018**
- OAR Line launches

**April 2018**
- Arizona Opioid Epidemic Act takes effect

**May 2018**
- Governor Ducey terminates Declaration of Opioid Emergency

**December 2017**
- Launch of 2018 Opioid Prescribing Guidelines

**January 2018**
- Arizona Opioid Epidemic Act is passed

Graphs showing:
- Opioid overdose cases
- Opioid deaths

Data from January 2017 to May 2018.
Good Samaritan Law
• Prohibits drug possession charges if seeking assistance

Prohibits dispensing, tighter prescribing rules for schedule II substances
• 5-day limit for initial prescriptions, 14-day for surgical procedure
• 90 MME dose limits
• Exemptions for traumatic injury, oncology, hospice/palliative care, prior scripts, MAT, etc.
• Naloxone prescriptions encouraged, required if >90 MME

Electronic prescription monitoring
• Providers are required to check PDMP database (for sch II or benzo)
• Electronic prescription required for all, beginning 1/1/2020

https://www.azleg.gov/legtext/53leg/1S/summary/S.100_ASENACTED.pdf
Reporting of treatment capacity
• Health care facilitates submit quarterly reports
• # Beds, # days at capacity

$10 million for SUD treatment

Education requirements
• 3 hours for med students
• 3 hours CME for Sch II providers each license renewal cycle

Behavioral health services referral
• Health care institutions that treat a drug overdose must refer

https://www.azleg.gov/legtext/53leg/1S/summary/S.100_ASENACTED.pdf
“Incarcerating people who possess or use small amounts of illegal drugs isn’t effective and does nothing to address their underlying challenges with addiction.”

-Police Chief Magnus
Learning Objectives

1. Describe the opioid epidemic
2. Summarize the Arizona Opioid Epidemic Act
3. Review Opioid Epidemic Act Resources and Updates
Vision:

To redefine pain and addiction as a public health issue with a whole-person, interprofessional approach.

A Social-Psych-Bio Approach
Trauma Impacts the Brain:

- **ACE (Adverse Childhood Experiences)** reveal a strong correlation between childhood trauma and the development of substance use disorders.\(^1\)

- Addiction is **“Ritualized compulsive comfort-seeking”** and a normal response to childhood adversity.\(^2\)

- Perspective: Turning “What’s wrong with you?” to “What happened to you?”

---

1. CDC and Kaiser Permanente
2. Dr. Daniel Sumrok, Center for Addiction Sciences
Medical Assessment Prior to Initiating Opioid Therapy

• Ask about present or past substance use, and family history of substance use.
• Screen for sleep disordered breathing issues.
• Assess psychiatric co-morbidities and suicide risk.
• Assess for pregnancy and likelihood of future pregnancy.
• Consider drug interactions.
Assess Risk of Opioid Use

Tools:

1. Screener and Opioid Assessment for Patients with Pain (SOAPP-R)
2. Current Opioid Misuse Measure (COMM™)
3. Opioid Risk Tool (ORT)

Prescription Monitoring Program (PMP)

The Arizona State Board of Pharmacy CSPMP

• Prescribers & pharmacists can review controlled substance dispensing information for patients.

Online training available:
• How to register and use the PMP
• Understand patient reports
• Look for Prescriptions filled

https://pharmacypmp.az.gov/
Percentage of Prescribers who had “lookups” in the Controlled Substances Prescription Drug Monitoring Program (CSPMP) January 1, 2017-May 31, 2018 prior to prescribing
• January 1, 2020 all schedule II controlled substances have to be electronically prescribed (no more Board of Pharmacy waivers).

https://surescripts.com/enhance-prescribing/e-prescribing/e-prescribing-for-controlled-substances/

• See Health Current to set up EPCS

https://healthcurrent.org/information-center/controlled-substances/
Healthcare providers can request free printed guidelines online at: azhealth.gov/OrderRxGuidelines

or download online: http://azhealth.gov/opioidprescribing
1. Non-opioid medications as first-line treatment for mild and moderate acute pain.

2. If opioids are indicated, initiate therapy at the lowest effective dose for no longer than 3-5 day duration; reassess if pain persists

Prescribing Guidelines: Treatment of Chronic Pain

1. Self-management strategies, non-pharmacologic treatments and non-opioid medications are preferred treatments for chronic pain.

2. Do not initiate long-term opioid therapy for most patients with chronic pain.

3. Coordinate interdisciplinary care for chronic pain patients to address pain and any substance use disorders or behavioral health conditions.

1. For patients on long-term opioid therapy, document informed consent (include: risks of opioid use, alternative therapy options, and therapeutic boundaries).

2. Do not use long-term opioid therapy in patients with untreated substance use disorders.

3. Avoid concurrent use of opioids and benzodiazepines. If on both agents, evaluate tapering or an exit strategy for one or both.

See the guidelines for all 17 items

Practice online with free CME

2018 ARIZONA OPIOID PRESCRIBING GUIDELINES

A voluntary, consensus set of guidelines that promote patient safety and best practices if prescribing opioids for acute and chronic pain.

Opioid Prescribing CME Courses: Responding to the Public Health Emergency
Online courses offering free AMA PRA Category 1 Credit™ to help Arizona prescribers use pain management best practices.

Number of Opioid Prescriptions Filled in Arizona

Fiscal Year to Date Comparison
July 18 - Mar 19 = 2,643,242
July 17 - Mar 18 = 3,211,869
18% Decline

AzDHS Vital Statistic Data
Individuals who Were Opioid Naive Prescribed Opioids for 5 or More Days

Declined 55% between April 2018 and March 2019

AzDHS Vital Statistic Data

- Sharp increases after 5 and 30 day opioid supplies
- 2\textsuperscript{nd} Prescription doubles risk of continued use at 1-year
• Overdose education + Naloxone

• HB2355
  • Permits pharmacists to dispense naloxone or any other opioid antagonist without a prescription.
  • Allows a prescribing authority to prescribe or dispense naloxone to a person at risk of overdose or any person in a position to assist (i.e., family).
  • Includes immunity from professional liability and criminal prosecution.
Opioid Assistance & Referral Line (OARLine)

• Tucson & Phoenix Poison and Drug Information Centers
• One of the first, real-time opioid consultation hotlines for patients with pain and opioid use disorder.

MAT Waiver Training

MAT Waiver Training

To prescribe buprenorphine, one of three medications approved by the FDA for the treatment of opioid use disorder, physicians are required to complete 8 hours of training in order to apply to the Drug Enforcement Agency for a waiver.

This course will provide prescribers with the full 8 hours of required MAT training.

Nurse Practitioners (NP) and Physician Assistants (PA) are required to complete 24 hours of training including the 8 hour MAT training.

Participants can obtain eight (8) hours of continuing education units (see pg. 2 for additional information).

Tuesday, October 22
8am-5pm (lunch on your own)

Instructors:
Monica Fata, MD & Michael Dekker, DO
Arizona Society of Addiction Medicine

Location:
ASU Tucson Campus
340 N. Commerce Park Loop, Suite #250
Tortilis Building, Room 203
Tucson, AZ 85745
(free parking)

No Cost to Attend
Provider Reimbursement: $150* (upon obtaining a DEA waiver)

Learning Objectives

1. Describe the opioid epidemic
2. Summarize the Arizona Opioid Epidemic Act
3. Review Opioid Epidemic Act Resources and Updates
4. In conclusion
What causes substance use addiction?

Models of Addiction:

• **Moral Model** – “addiction is a moral weakness”

• **Disease Model** – addiction is a chronic, but treatable medical condition. Does not happen on a continuum, you either have it, or you don’t.

• **Psychological/Trauma/Coping Model** – Addiction is a coping mechanism (secondary) to a mental health issue.

• **Socio-psycho-biological Model (Holistic Model)** – Social, Psychological, and Biological factors contribute to chronic and problematic drug use.
Harm Reduction Approach

• Practical strategies aimed at reducing the negative consequences associated with drug use.
• Accepts drug use is going to happen
• Drug use happens on a continuum
• Not everyone that uses drugs needs treatment
• We need different treatment approaches for different people.
• Recognizes that social inequalities and hardships affect people’s vulnerability to AND capacity for effectively dealing with drug-related harm.

https://harmreduction.org/about-us/principles-of-harm-reduction/
Why don’t people get help?

• Limited treatment options (Do not know where to go)
• Drug addiction is the most stigmatized problem in the world (WHO).
• Have to accept “I have a problem”
• Affordability
• Fearful of withdrawal
• Unsuccessful attempts at quitting
• May lose job, housing, and other security nets
