Hospitalist Opportunity

Envision Physician Services is seeking dedicated hospitalists to join our team at Cartersville Medical Center! **Contact us today** about this exciting opportunity.
Check out the 2019 Chapter Meeting Highlights and don't miss the lecture on Dementia & Delirium

Study explores end-of-life clarity in dementia patients

PsychCentral
An interdisciplinary research team is investigating cases of paradoxical lucidity, a phenomenon in which a person with severe dementia suddenly “wakes up” and exhibits surprisingly normal behaviors, only to pass away shortly thereafter. Writing in the journal Alzheimer's & Dementia, the researchers outline what is known and unknown about paradoxical lucidity, consider its potential mechanisms, and detail how a thorough scientific analysis could help shed light on the pathophysiology of dementia. Frail patients at increased risk of delirium and cognitive decline after cardiac surgery

Specialty Medical Dialogues
Patients with frailty are at a higher risk of developing delirium after cardiac surgery as compared to patients without frailty. Also, frail patients are at increased risk for cognitive decline after 30 days of the surgery. These differences, however, diminish one year after the surgery. These are the results of a study presented at the annual meeting of the American Society of Anesthesiologists. READ MORE
