Please enjoy your complimentary copy of the December 2015 edition of HJM&PH. This month’s edition features a study examining the prevalence of traumatic head injury among surfers in the United States and an article exploring sociocultural factors that affect chewing behaviors among Micronesian betel nut chewers and ex-chewers. A third study examines diverse risk factors impacting infant mortality in Guam, including exposure to a herbicide called Agent Orange. Finally, continue to learn about the John A. Burns School of Medicine’s accreditation process in this month’s Medical School Hotline.

Apply to this year’s HJM&PH Writing Contest!
