Hip Pain
Review of Physical Exam and An Approach To The Differential Diagnosis

David G. Liddle, MD
Assistant Professor of Orthopedics
Assistant Professor of Internal Medicine
Vanderbilt University Medical Center
Nashville, TN
Objectives

• Review pertinent anatomy and pathology associated with common causes of hip pain
• Review historical and physical exam findings that help differentiate common causes of hip pain
• Review imaging findings relevant to these causes of pain and discuss a rationale for appropriate use of diagnostic tests
• Review the best evidence available to the guide treatment of these conditions
