

A Report from Virginia's Internal Medicine Physician Specialists:

How Will the Medicaid Expansion Benefit Virginia?

Introduction

In the state of Virginia, hundreds of thousands of low income patients are unable to qualify for Medicaid because they do not meet current eligibility standards. Patients who lack health care coverage have poorer health outcomes, less access to preventative care and screenings, and are less likely to seek treatment until they have developed a serious medical condition. Virginia hospitals are required to take care of these patients, even as federal payments to offset uncompensated care costs, called disproportionate care payments, are declining, putting some hospitals at serious financial risk.

There is a better way for Virginia to care for some of its poorest citizens. Virginia can join with a majority of states across the country to accept federal dollars, available through the Affordable Care Act, to expand eligibility to all persons with incomes up to 133% of the Federal Poverty Level (FPL). A growing number of states have agreed to accept the offer of federal dollars – 100% of the cost of expansion in 2014 - to expand Medicaid to the poor and near-poor. These states realize it is fiscally smart to accept Medicaid dollars while the federal government is offering its highest level of support.

Virginia should do the same. The Virginia chapter of the American College of Physicians believes that this is a rare opportunity that enables Virginia to provide coverage to so many poor and vulnerable patients at little cost to the state itself. The longer we wait, the less federal money will be available, and the longer thousands of Virginians will be without health insurance coverage.

Our organization represents 3,850 internal medicine specialists and medical student members who live, study, teach and practice in the Commonwealth of Virginia. We are a chapter of the American College of Physicians, which represents 137,000 internal medicine and medical student members nationwide. ACP is the largest physician specialty society and second largest physician-membership organization in the United States.

No matter where one stands on the Affordable Care Act itself, the evidence is clear: Virginia will greatly benefit by accepting federal dollars to extend Medicaid, and Virginians will be harmed if it does not:

- **Extending Medicaid coverage to Virginia's low-income uninsured will improve health status and quality of life.**

Numerous studies show that individuals who enroll in Medicaid benefit significantly compared with the uninsured.

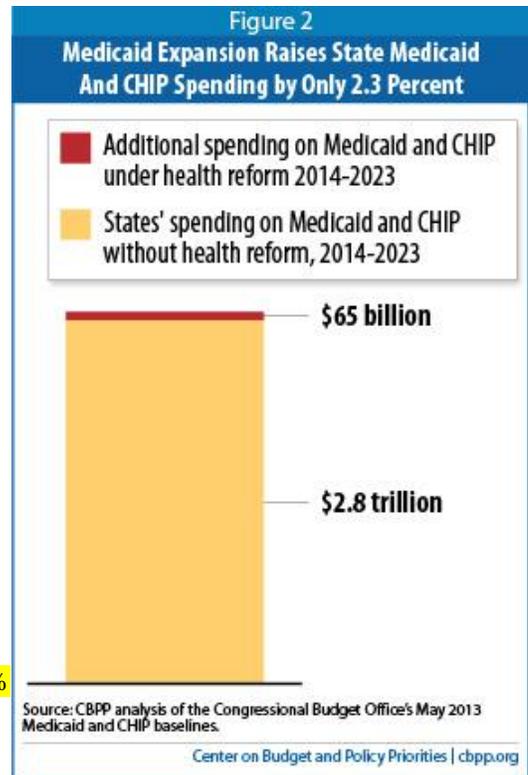

- For instance, a study comparing Oregon Medicaid enrollees with uninsured people found that 35% of Medicaid enrollees were more likely to receive outpatient care compared to the uninsured. Seventy percent of Medicaid enrollees reported having access to a regular source of primary care, and 55% were more likely to have a doctor they usually see, compared with the uninsured.¹
- A follow-up study of Oregon Medicaid enrollees also showed that compared to the uninsured, enrollees reduced catastrophic medical expenditures by 80% and increased utilization of some preventative care services including mammograms and cholesterol screenings.²
- Medicaid coverage also reduces mortality. One study concluded that mortality declined after states expanded their Medicaid programs, particularly among those aged 35 to 64 years, minorities, and people living in poorer areas.³
- Medicaid coverage may also help curb racial and ethnic health care disparities that are exasperated by lack of insurance, such as lack of usual source of care or receipt of preventative screenings.⁴ **About**

42% of adult Virginians newly-eligible for Medicaid are people of color, a population that is more likely to be uninsured than whites.⁵

➤ **Extending Medicaid coverage will reduce the numbers of uninsured Virginians by as much as 37 percent.**⁶

- Thirteen percent of Virginians – over one million people – were uninsured between 2011 and 2012.⁷ According to one estimate, 412,000 adult Virginians would be eligible for Medicaid coverage, including 342,000 who would be newly eligible under the health reform law.⁵
- This is a significant expansion, as childless, non-disabled adults are currently ineligible for Virginia’s Medicaid program. The Commonwealth currently restricts eligibility to parents of dependent children with incomes up to \$10,120 (for a family of three) 52% of federal poverty level.⁸

➤ **Medicaid expansion will help the “safety net” of physicians, hospitals, and academic medical centers better serve their low-income patients and reduce cost-shifting to the rest of us.**

In anticipation of the Medicaid expansion, the health reform law increases Medicaid primary care payments to Medicare levels in 2013 and 2014, paid for entirely by the federal government at no cost to Virginia. In addition, a reduction in uncompensated care will help the “bottom line” of Virginia’s hospitals and physician clinics that take care of Medicaid patients, and the state and local governments that help fund indigent care.

- In 2012, the last year for which information is available, Virginia’s Medicaid primary care payment rates were 74% of Medicare rates.⁹ While Medicaid physician participation lags behind Medicare and private insurance, evidence shows that physicians are more likely to accept new Medicaid patients in states that pay closer to Medicare rates.¹⁰
- Hospitals will benefit from reduced uncompensated care costs, as the newly-insured will no longer be forced to seek free care provided by hospitals. Uncompensated care costs are shared across the public and private sectors.
- It’s estimated that state and local governments provide 30% of the cost of uncompensated care. By expanding Medicaid to cover the previously uninsured, Virginia would benefit from a portion of uncompensated care savings.¹⁵
- The Medicaid expansion is especially crucial for hospitals, since the health care reform law cut the federal share of uncompensated care payments because lawmakers assumed the Medicaid expansion would heavily reduce the need for uncompensated care. In FY2012, Virginia hospitals received about \$90 million in Medicaid federal funds to help offset the cost of covering the uninsured.¹¹

In addition, *everyone* in Virginia pays for the care that is provided on an uncompensated basis by hospitals and physicians, because those costs are shifted to the rest of us through higher premiums for our health insurance

and higher taxes for government safety-net programs. And every one of us will benefit when there is less uncompensated care because more Virginia will be covered by Medicaid.

➤ **The Commonwealth will benefit fiscally by accepting this unprecedented offer by the federal government to pay almost all of the costs of extending Medicaid to more Virginians.**

Medicaid's rising costs are a growing burden for Virginians, mainly because the federal government does not pay a fair share of Medicaid costs while imposing costly federal mandates on the Commonwealth. But this new program is different, because the federal government pays almost the entire cost.

- Right now, the federal government pays about 50% of the cost for Virginians enrolled in Medicaid; our Commonwealth pays the other 50%.¹²
- But starting in 2014, the federal government will pay 100% of the cost—yes, all of it!—for the first two years of extending Medicaid to all Virginians with incomes below 133% of the federal poverty level. Gradually, the federal government's share will go down to 95% and then 90% over the next ten years. Still, the federal contribution would be the most ever offered to Virginians to cover more of our residents.
- The CBO estimates that states will incur an additional 2.3% increase in Medicaid costs compared with what they would have spent in absence of the health care law, an estimate that includes those currently eligible for Medicaid coverage.¹³
- A Kaiser Family Foundation study predicts a 2.6% increase in Virginia's Medicaid spending from 2013-2022.¹⁴ However, a 2011 Urban Institute report estimated that the ACA could save Virginia up to \$146 million over 2014-2019 when enhanced Medicaid spending, uncompensated care reductions, and other savings are factored in.¹⁵
- A study by Chmura Economics & Analytics found that between 2014 and 2019, expanding Medicaid could boost Virginia's economy by \$3.9 billion annually.¹⁶
- By choosing not to expand, Virginia is forgoing \$2.8 billion in federal funds in 2022.¹⁷
- If Virginia waits to accept the federal offer to pay for the Medicaid extension, it will get less help from the federal government. 100% federal funding is available only in 2014-15, so if Virginia waits until 2016, the federal government's initial contribution will be 95% of the cost. If Virginia waits until 2020, the federal government's annual contribution will be 90% of the cost. Delay now means Virginia taxpayers will pay more later to cover the same people under Medicaid.
- Should Virginia accept the federal dollars now, the Commonwealth is not locked in if the federal government reneges in the future on the commitment to pay for most of the Medicaid expansion. If the federal payments are reduced, then Virginia could revisit its decision to expand Medicaid.

➤ **What would happen to the uninsured if Virginia chose not to expand Medicaid?**

In states that have yet to expand Medicaid, thousands of Americans have fallen into a "coverage gap" in which their income is too high to qualify for existing Medicaid programs but too little to qualify for subsidies on the health insurance marketplaces. Under the health reform law, Congress expected uninsured adults earning less than 133% of FPL to be covered by Medicaid expansion. The Kaiser Family Foundation estimates that nearly 191,000 uninsured adult Virginians fall into this coverage gap.¹⁸

Think about that: if Virginia turns down or delays accepting the federal money to extend Medicaid, we will be leaving our poorest residents with no other way to get coverage—resulting in poorer health outcomes for them, more uncompensated care for hospitals and physicians who take care of them, more cost-shifting for the rest of us, and ultimately, higher cost to the Commonwealth.

***Characteristics of Uninsured
Adult Virginians Newly-
Eligible for Medicaid,
Incomes Below 133% FPL5***

Gender: 51% Male

49% Female

Family status:

20.3% are parents

79.7% are adults
without dependent
children

As an organization representing Virginia’s internal medicine physicians and medical students, our greatest concern is for the working people—*our patients*—who will be left behind without any access to health insurance coverage if Virginia declines the federal money to expand Medicaid. We are speaking for them when we ask Governor McAuliffe and the Virginia legislature to do the right thing and accept this unprecedented opportunity to provide coverage to our poorest patients, at minimal cost to the Commonwealth.
