ACP does not support QPP measure 441: "IVD: All or None Outcome Measure." The developers did not provide adequate information for us to appropriately review the measure. We rated the measure based on the specifications provided on the MIPS website. We do not support this measure because it disregards patient preferences, specifications do not consider factors beyond the clinicians control (e.g., patient adherence, patient access), and it does not align with the Eighth Joint National Committee (JNC-8) recommendations for hypertension management.
